

REQUIREMENTS FOR GRADUATE STUDENTS

Department of Chemistry Missouri University of Science and Technology

Approved January 7, 2020. Annual Review Timeline added February 4, 2020.
University rules and regulations supersede those set forth by the department.

These rules apply to all graduate students irrespective of the dates of their start in the graduate program. Note one differentiation in section C.9 based on start date.

Timeline for Mandatory Milestones

Milestone	Timeline
Qualifier Examinations / Qualifying	Fully qualified by the end of 2 nd year.
Comprehensive Exam	Completed by the end of 3 rd year.
Present Full Departmental Seminar	At least one semester before defense.

I. ADMISSION

All graduate students must secure admission to graduate study through the director of admissions. Applicants must submit an official transcript of all their previous work with their applications for admission. Application for an assistantship should be addressed to the Chair of the Department of Chemistry and must also be accompanied by an official transcript and three letters of recommendation.

II. UNDERGRADUATE PREPARATION

The normal undergraduate preparation expected of students who wish to engage in graduate studies in chemistry is a B.S. degree in Chemistry. This includes two semesters each of general, organic, physical, analytical (including instrumental analysis), and one semester of advanced inorganic chemistry. Students with non-ACS accredited degrees or with degrees in other disciplines may, in some cases, have undergraduate courses required as a non-credit portion of the student's program.

III. PLACEMENT EXAMINATIONS FOR ENTERING GRADUATE STUDENTS

Each entering graduate student will be required to take placement examinations before being allowed to register for the first time in a regular semester. The grades on this examination are not entered on the student's permanent record. The examination consists of four parts dealing with analytical, inorganic, organic, and physical chemistry as commonly presented in undergraduate curricula in chemistry. A score of 70% will be considered a passing grade for each section. The placement examination will be used to supplement the student's official transcript(s) in

recommending a proper starting point for the student's graduate study in the department as well as acting as the Qualifying Exam for preparation to the Ph.D. degree.

Undergraduate Deficiencies (Placement Examinations): Students are required to demonstrate competency in analytical, inorganic, organic, and physical chemistry (Section III). After completion of all of the placement examinations (in the week before the start of the semester), students will be given their results on each exam. Based on consultation with an advisor or advisory committee, the student may be (a) required to take a course in each area where a deficiency occurs, (b) advised to take a course in area(s) where lesser deficiency is noted, or (c) given no recommendation (i.e., signifying adequate preparation for graduate work in the areas).

In consultation with the incoming student, the advisor or advisory committee will make a plan of action which includes the course work required to remove any deficiencies noted. Any changes in the requirements must be approved by the faculty. The division will decide the appropriate course(s) for removal of a deficiency identified by its placement exam. To remove these deficiencies, a grade of "C" or better must be achieved in the course. However, a graduate student cannot have more than three "C" grades from all of his/her coursework. Deficiencies must be removed by the end of the second year in residence or loss of regular graduate status will result. It is anticipated that most students will fulfill any requirements by the end of the first year.

IV. REQUIREMENTS FOR ADVANCED DEGREES

The Department of Chemistry offers graduate programs leading to the degrees of Master of Science and Doctor of Philosophy. Attainment of the Master's degree is not prerequisite to a program of study leading to the Ph.D. degree.

Any student who has obtained a Master's of Science degree in Chemistry from any other institution cannot pursue a second Master's degree in Chemistry at S&T. For M.S. degrees not explicitly in Chemistry, the applicability of this guideline will be evaluated on a case-by-case basis by the *Graduate Affairs Committee*.

Graduate degrees in chemistry at Missouri S&T are awarded to students who demonstrate scholarly achievement beyond the ordinary. All graduates must pass the teaching workshop with a grade of "B" or better before taking the comprehensive or final defense in pursuit of an advanced degree.

All M.S. and Ph.D. students are required to enroll in Chem 6010 every semester except for their terminal semester (only for one semester can the student be excused from Chem 6010). All chemistry graduate students are required to present a full research seminar in Chem 6010 before graduation. All seminars must be given in the spring or fall semester.

The incoming graduate students must pass, within the first two semesters of enrollment, a minimum of four regular lecture courses offered by the department with a minimum grade point average of 3.0/4.0. This requirement may be waived [by the Chair of the Department] if merited by high performance on the placement examination. The time limit may be extended to a maximum of four semesters by the Chair of the Department in the case of a student admitted with a deficiency in one or more areas of chemistry.

Presently approved regular lecture courses in six major areas of chemistry are listed below. At least three of these six major areas of chemistry must be represented in the student's regular courses. Students will be informed when changes in the list are approved by the chemistry faculty.

- a) Analytical Chemistry: Chem 5510, 5710, 6510, 6550, 6555, 6570
- b) Biochemistry: Chem 5610, 5619, 5620, 5630, 6650
- c) Inorganic Chemistry: Chem 5310, 6330, 6380
- d) Organic Chemistry: Chem 5210, 5220, 6220, 6240, 6250
- e) Physical Chemistry: Chem 5410, 5420, 5430, 6450
- f) Polymer Chemistry: Chem 5810, 5850, 6820, 6840

A. Master of Science in Chemistry (with Thesis)

(A.1.) Complete a minimum of 30 credit hours of acceptable graduate work, including the following minimum credits: 6 hours of 5000/6000-level lecture courses and 6 hours of Chem 6099 (research). The *Graduate Catalog* recommends that 6 of the 30 credit hours be obtained in out-of-department courses. No more than 12 total hours of research, special problems, special investigations, special readings, and graduate seminar can be applied to the 30-hour minimum.

(A.2.) Conduct a research program and write a satisfactory thesis. The M.S. thesis will only be considered by the student's *Graduate Advisory Committee* and the final oral examination scheduled after at least one paper (refereed, peer-reviewed journal) or patent from that thesis has been accepted for publication. The paper or patent should be closely related to the thesis work as evaluated by the student's advisory committee.

(A.3.) Present a full departmental graduate student research seminar before defending.

(A.4.) Pass a final oral examination.

(A.5.) It is required that a M.S. candidate chooses an advisor and submits a planned program of study [Form 1] by the end of the 6th week of their second semester. A three-member advisory committee shall also be selected and reported in Form 1, based on recommendations by the student and the advisor, and approved by the Chair of the Department. To remain in good standing, the student must meet with the advisory committee on an annual basis and have the *Annual Committee Meeting Form* filled out, signed, and returned to the department. The first annual meeting must occur within the first 6 weeks of their 3rd semester in the M.S. program. Specifically, students starting in August will have their first annual meeting in August of the following year, while students starting in January also will have their first annual meeting in January of the following year.

B. Master of Science in Chemistry (without Thesis)

The *Graduate Affairs Committee* will appoint a faculty advisor for students pursuing this degree.

(B.1.) Complete a minimum of 33 credit hours of acceptable graduate work, including the following minimum credits: 9 hours of 5000/6000-level lecture courses and at least one graduate course in each of five of the six areas of chemistry listed previously. It is recommended in the *Graduate Catalog* that at least 6 of the 33 credit hours be devoted to courses outside the major department. No more than 4 total hours of special readings, special investigations, special problems, and graduate seminar can be applied toward the 33-hour minimum.

(B.2.) Pass a final written comprehensive examination administered by the department. Students who have received grades of “B” grade or better in all courses as graduate students, and have a 3.5 or better cumulative GPA in their courses for graduate credit may be excused from the M.S. comprehensive examination upon recommendation of the department.

(B.3.) Continuing Ph.D. students who have successfully completed the relevant coursework described in Section B.1 and passed the written and oral comprehensive examinations, associated with the Ph.D. degree, as indicated in Section C.6 (below), are deemed to have earned, and may apply for and be awarded, an M.S. degree in Chemistry (without thesis).

C. Doctor of Philosophy in Chemistry

The Ph.D. degree is awarded for studies focused on original research and merely a minimum of 24 hours of graduate level courses is required, cf. Section C.4. Note that a student who obtained a M.S. in Chemistry (with thesis) at Missouri S&T would not require any additional courses; the 24 credit hours in section C.4 can be included in the 30 credit hours in section A.1.

(C.1.) Students must complete requirements for the Report of Qualifying Exam (Ph.D. Form 4). This requirement is satisfied when the student takes the placement exams and subsequently completes all requirements stipulated as a result of placement exams. The placement requirements should be completed by the end of the second year.

(C.2.) Students must select a *Graduate Research Advisor* and establish a five-member *Graduate Advisory Committee* by the 6th week of the student’s second semester. The latter should be approved by the *Graduate Research Advisor* and the *Chair of the Department*. At that time, the students must submit Form 5 with the *Graduate Advisory Committee* selection and degree plan to the department. With the qualification process completed and Ph.D. Form 4 filed, the *Chair of the Department* will sign and forward Form 5 to the *Vice Provost of Graduate Studies*.

(C.3.) The graduate student must meet with the student’s *Graduate Advisory Committee* on an annual basis starting within the first 6 weeks of the fall semester of their 2nd year in the Ph.D. program. Specifically, students starting in August will have their first annual meeting in August of the following year, while students starting in January also will have their first annual meeting in August of the following year. During these meetings, the *Graduate Advisory Committee* should review progress in course work as well as research and have the *Annual Committee Meeting Form* filled out, signed, and returned to the department office to remain in good standing. The *Graduate Affairs Committee* (GAC) will monitor students’ progress through this *Annual Committee Meeting Forms*.

(C.4.) Requirement for 5000 and 6000 level courses. A minimum of 24 hours of graduate level instruction is required. At least 18 hours of chemistry lecture/lab courses at the 5000 and 6000 level must be completed. In some cases, an out of department course (e.g., physics, biological science, math, materials science) at the 4000 level or higher may be substituted, if it is appropriate for the plan of study. All six of these courses must appear in the plan of study and may include up to 9 hours in graduate transfer credits.

(C.5.) The *Graduate Catalog* encourages students to elect a minor field of study consisting of at least 12 hours of work outside the major area of specialization.

(C.6.) The Department of Chemistry has no formal requirement for proficiency in any foreign language.

(C.7.) Students must pass a comprehensive examination to the satisfaction of the student's *Graduate Advisory Committee*. The comprehensive exam will comprise of submission of a written synopsis by the student describing their current research project and future directions and an oral presentation focusing on the same, or, if advised by the student's advisory committee, they may submit and defend a research proposal. The comprehensive examination must be completed by the end of the third year of graduate study.

(C.8.) Present a full departmental research seminar either in the fall or spring and at least one semester before the student's Ph.D. defense.

(C.9.) Students must conduct original research, write a dissertation in proper scientific terminology, and provide satisfactory defense of this work in a final oral examination. The Ph.D. dissertation will only be considered by the student's graduate advisory committee and the final oral examination will only be scheduled after at least two peer-reviewed papers have been published or accepted for publication in refereed journal(s) and after one regional or national conference presentation has been given (DoC as well as CASB has several schemes available for providing financial support for students giving oral or poster presentations at regional/national conferences). For students who started their Ph.D. program prior to January 2014, the minimum publication requirement consists of one accepted and one submitted publication in peer-reviewed journal.

The peer reviewed publications counted towards the minimum requirement should comprise a major part/chapter(s) of the student's dissertation, the student has to be the primary author (as judged by the student's *Graduate Advisory Committee*), and the advisor/co-advisor should be one of the corresponding authors. Note that (i) submitted manuscripts, manuscripts in preparation, or manuscripts under review cannot be counted towards the minimum publication requirement and (ii) patents (filed or accepted) will not be counted toward fulfilling the minimum publication requirement.

(C.10.) Before scheduling the Ph.D. defense, the student should contact the *Graduate Affairs Committee* (GAC), which will perform their own evaluation to confirm that the student is meeting the minimum requirements for degree completion. GAC will advise the *Chair of the Department* of its evaluation.

(C.11.) The student is obliged to provide a final draft of the dissertation to the *Graduate Advisory Committee* at least two weeks prior to the date of the defense.

(C.12.) Students must satisfy the residency requirements as specified in the *Graduate Catalog*.

(C.13.) Failure to comply with the deadlines above will result in loss of Ph.D. status and departmental support. Reinstatement can be made only by written petition of the student and a positive vote of the departmental *Graduate Faculty*.

V. LIMITATIONS ON GRADUATE TEACHING ASSISTANT (GTA) POSITIONS

(A.) Graduate Teaching Assistant (GTA) support for a graduate student in the M.S. program is limited to 3 years.

(B.) Graduate Teaching Assistant (GTA) support for a graduate student in the Ph.D. program is limited to 5 years (including any TA appointments while working on a prior M.S. degree at Missouri S&T). In no case will TA support be given for more than five year.

(C.) Graduate Assistant (GA) support (a.k.a., Grader support) will be withdrawn if a graduate student has not passed the *Instructional Communications Workshop* (GTA Workshop) to qualify as a Graduate Teaching Assistant after two years.

(D.) Priority for departmental financial assistance will be given in the order of Ph.D., Master's with Thesis, and Master's without Thesis. Departmental support may be withdrawn if a student switches from a Ph.D. degree to a Master's degree.
