

Development of Catalytic 3d-Transition-Metal Reagents

Research Topics

Development of First-row Transition Metals for Atom/Group Transfer to C–H/C=C Bonds

1. Nitrene transfer (aminations, aziridinations)
2. Halogen transfer (radical polymerizations)
3. Oxo transfer (hydroxylations, epoxidations)

Approach

1. Synthesis of Suitable Ligands & Metal Catalysts
2. Extensive Application in Catalysis
3. Mechanistic Studies

Techniques

NMR, X-ray Diffraction, EPR, E-chem, Magnetics
